

# 2011 Air Quality Poster Contest

## "Win With Air Quality"

### Kindergarten - 2nd Grade Honorable Mentions

Malachi Robinson • Long Hill Elementary

Logon Byrd • C. Wayne Collier Elementary

Stella Valenzuela • Long Hill Elementary

### 3rd - 5th Grade Honorable Mentions

Samuel Marquez • E. Melvin Honeycutt Elementary

Alex Zeigler • New Century Elementary

Katie Stewart • Long Hill Elementary

## What is OZONE?

Sign up for daily air quality forecasts at [www.enviroflash.info](http://www.enviroflash.info).

**Ozone** is a molecule formed when three atoms of oxygen react in sunlight. Because sunlight is needed for ozone to form, ozone is a major concern in the warm summer months.

**Ozone forecasting season is from April 1 through September 30.** During Ozone season there is a daily forecast of the air quality, that forecast is called the Air Quality Index. The Air Quality Index is color coded so people know how air impacts daily activity. Do you know the code?

AIR QUALITY INDEX		
Color	Ozone Level	Protect Your Health
Green	Good	A regular day. No health effects.
Yellow	Moderate	People with asthma, young kids and elderly adults should limit playing hard outside for too long.
Orange	Unhealthy for Sensitive Groups	Active kids and adults and people with asthma should not play outside too long.
Red	Unhealthy	No one should play hard outside for a long time.
Purple	Very Unhealthy	Everyone should avoid playing outside.
